## SUMMARY

I am developing mobile applications for iOS with Swift. I keep myself up to date on mobile applications, follow new technology and develop projects. I write blog posts from what I learned, in this way I make my information permanent. I also learn backend structures with Server Side Swift and Go Lang. I want to improve myself with mobile applications.

## SKILLS

- In-app purchase, push notifications with Swift.
- Interface with UIKit and SwiftUI.
- Network operations with JSON, Codable, Alamofire and Firebase
- OOP (Object Oriented Programming).
- Unit and UI Test, Data structures.

## EXPERIENCE

### ILAO - [ilao.co](http://ilao.co)

Remote - May 2019

- I coded the designs of mobile applications, developed the backend connection.
- IOS features such as Push Notification, in-app purchases, iCloud, keychain were used.
- I published the apps to testers via Test Flight and on the AppStore.

### WEVENT - [wevent.io](http://wevent.io)

Remote - September 2019

- Design implementation, integration and development for the Wevent iOS application.
- iOS accessibility, push notification, backend integration features.
- Wevent is the platform that enables users to reach events and event organizations to reach users.
- Wevent includes features purchasing tickets for events, recommending events for user's interests.

## EDUCATION

### Celal Bayar University - Software Engineering 3rd Grade

- C courses for university students,
- Software and technology trainings for middle school students at the Hour of Code event.
- Mip Hackthon second prize. Organized by Manisa Celal Bayar University and Manisa Organized Industry. Mobile application with useful features for daily life.
